

Many large project in the field of bridge construction make use of special construction equipment to achieve better results and to reduce construction times. After the completion of a project this equipment represent a valuable resource which can be exploited again.

Our mission is to re-enable and adapt used bridge construction equipment in order to make it employable by construction companies all around the world in the realization of new projects.

Among the equipment we offer are: launching equipment, straddle carriers and low bed carriers, gantry cranes, special moulds, over head cranes, form travelers, movable scaffolding systems and special equipment for post tensioning.
